

LED Menu Boards

Double sided day part menu boards

- Energy efficient LED illumination system
- Day part menu function
- Standard sizes available online
- Custom sizes and finishes can be fabricated
- Components comply with C-Tick standards

Our double sided menuboards have the ability to be either mounted on a bulkhead or a supported ceiling to suit your installation requirements. LED technology is utilised to provide bright, uniformed illumination which is energy efficient and has less environmental impact when compared to traditional flourescent or cathode technologies.

The real value to the double sided unit is its ability to be manually rotated to change your menu when scheduled (i.e. breakfast to lunch)

Depending on your store design, both size options come with a single image per side and can be mounted side by side to create a multiple image restaurant menu board.
